FOR IMMEDIATE RELEASE

"AI Transforms Text into Virtual Experiences with Text-to-Space"

Dubai, United Arab Emirates - Versy, a leading Dubai-based company in the metaverse space, announces its new generative AI algorithm, Text-to-Space. The algorithm enables businesses to create interactive 3D virtual experiences from a text prompt.

Text-to-Space was developed by the team at Versy recognized as one of the pioneers in the metaverse industry. The algorithm leverages the latest advancements in generative AI technologies to create virtual environments in real-time, based on a text description. This opens up new opportunities for businesses to engage with their customers in innovative and interactive ways, from virtual product demonstrations to gamified marketing campaigns.

"We are thrilled to announce Text-to-Space that will bring the metaverse to life for businesses of all sizes," said **Piero Fioretti, CEO of Versy**. "Virtual experiences will change the way we communicate. Their ability to capture the attention of the audience and convey strong and meaningful emotions marks their potential as limitless. Text-to-Space is here to make it possible for businesses to leverage their potential and bring their ideas to life in new and exciting ways."

Text-to-Space is already attracting interest from businesses in various industries, including gaming, events, real estate, retail, and education. The development of the algorithm is backed by partnerships with NVIDIA Inception and Intel OneAPI that support Versy in the development of their cutting-edge technology.
